

Therapeutic Strategies in Educational Settings

Reflection Guide

How does the featured therapist's work support children with developmental differences?

How can these approaches be used to support typically developing children?

Based on today's learning experience, what strategies do you feel confident putting into practice with the children in your care?

What changes to your environment will you need to make in order to implement these strategies? (materials, furniture, lighting, room arrangement, accessibility, etc.)

How can you engage with co-workers, program leaders, and family members to support these efforts?

What strategies would you like to learn more about before you put them into practice?
